Managed Extended Detection and Respond

Background

The persistent growth of advanced cyber-crimes and the constantly changing nature of IT systems (including hybrid, multi-cloud environments, IoT devices, etc.) make it difficult to effectively build solid attach defense.

Scenario

One of the most efficient ways to address current cybersecurity challenges is to centralize the security efforts, establishing an in-house Security Operations Center (SOC) is significantly difficult for most organizations since it requires an enormous amount of time, expertise, and money.

Solution

Outsourcing all activities connected to building and maintaining cyber security defense is to hire a Telelink Business Services managed Extended Detection and Respond team that provides continuous monitoring and rapid incident response.

Services

Telelink Business Services' Managed Extended Detection and Respond (MXDR) is divided into three different service plans adapted to your firm's needs. Our MXDR include the following key features:

ADVANCED THREAT DETECTION

CONTINUOUS MONITORING

THREAT HUNTING AND INVESTIGATION

INCIDENT RESPONSE AND REMEDIATION

FORENSIC INVESTIGATION

SECURITY ORCHESTRATION AND AUTOMATION

VULNERABILITY ASSESSMENT
